3rd Workshop on
Propagation Channel Models and Evaluation Methodologies for 6G

WORKSHOP General Chair

Peiying Zhu, Huawei Technologies, Canada

WORKSHOP Co-Chair

Jian Li, Huawei Technologies, China
Roberto Verdone, University of Bologna, Italy

TPC Co-Chair

Narcis Cardona, UPV, Spain
Jianhua Zhang, BUPT, China
Mate Boban, Huawei Technologies, Germany

TPC MEMBERS

Christian Schneider, Technische Universität Ilmenau, Germany
Chen Huang, Purple Mountain Laboratories, China
Chong Han, Shanghai Jiao Tong University, China
Jie Huang, Southeast University, China
José Rodríguez-Piñeiro, Tongji University, China
Ke Guan, Beijing Jiao Tong University, China
Pan Tang, BUPT, China.
Peize Zhang, University of Oulu, Finland
Ramez Askar, Fraunhofer HHI, Germany
Roy Sun, CableLabs, USA

Shu Sun, Shanghai Jiao Tong University, China
Taro Eichler, ROHDE & SCHWARZ, Germany
Thomas Zemen Austrian Institute of Technology, Austria
Tommi Jamsa, Huawei Technologies, Germany
Vittorio Degli-Esposti, University of Bologna, Italy
Wenfei Yang, Huawei Technologies, China
Xi Liao, CQUPT, China
Xiongwen Zhao, North China Electric Power University, China
Xuesong Cai, Lund University, Sweden
Ziming Yu, Huawei Technologies, China

SCOPE

The goal of the 3rd workshop on Propagation Channel Models and Evaluation Methodologies for 6G is to investigate the up-to-date research on i) wireless propagation channel measurement and modeling and ii) the evaluation methodology required for future 6G application scenarios. Compared to 5G and 5G-Advanced, 6G is envisioned to support considerably larger number of services with frequency from low, middle, to higher frequency bands up to the Terahertz band, wider coverage including space-air-ground-sea and more advanced technologies. The workshop will focus on two aspects. First, it will address new challenges for wireless channel modeling due to both new technology trends and new application scenarios introduced in 6G. Second, it will address the application of these models in the evaluation of candidate technologies and solutions for 6G in the upcoming standardization activities in ITU, 3GPP, etc. The joint efforts from both academia and industry will be the key for achieving these goals.

TOPICS OF INTEREST (*including, but not limited to*)

- Novel channel sounder designs and measurement methodologies to support measurement campaigns for 6G application scenarios.
- Novel channel modeling methodologies for 6G.
- Measurement and channel modeling in frequency band including low-band, mid-band, mmWave, sub-THz, and THz.
- Measurement and modeling of advanced antenna technologies.
- Measurement and channel modeling for integrated sensing and communication.

- Measurement and channel modeling for connected industries and automation.
- Measurement and channel modeling for non-terrestrial networks.
- Measurement and channel modeling for connected automated driving.
- Novel evaluation methodologies for 6G.
- New techniques to generate and analyze radio channels.
- Evaluation methodologies for antenna configurations and antenna patterns.
- Novel evaluation methodologies for network deployment.
- Results of simulations and performance testing.

IMPORTANT DATES

Paper Submission Deadline: **16 Aug. 2024**
Paper Acceptance Notification: **1 September 2024**
Camera Ready: **1 October 2024**

SUBMISSIONS

Submission: https://edas.info/newPaper.php?c=32696
Contact: Jian Li, calvin.li@huawei.com
